Createspace, United States, 2014. Paperback. Book Condition: New. 216 x 140 mm. Language: English . Brand New Book ***** Print on Demand *****.With all the technology available to us today, it is important to realize that computers and machines will never be able to envision, imagine, perceive, channel and generate ideas, nor will they be able to teach you how to do so. To do such a thing, it requires direct human to human interaction and the conscious retraining of the stimulus response mechanism in all of us. Yet our culture is being deluded and duped to think that this is still possible with technology. For example certain websites, claim to help you expand your brain. Well this is a half truth. It does speed up your brain and dilate some neural pathways, but the pathways it develops are those of memory. Even better comprehension is still about memories, just a bigger collection of them. It does not teach you how to envision and think objectively. The neural pathways to that are in completely different parts of the brain. In fact all those websites can do is show you how to imitate a computer and be faster at it. In other words all dressed up for thinking but nowhere to go. Now this does not mean that memory isn't important, but it is not thinking. It is also important to understand that human to human interaction of brain training is irreplaceable and the most important factor of human development. The ability to envision and think objectively is the defining principal of intelligent life. This separates us from any other living species and being a totally mechanical one. With the momentum of enticing technological advances, it is the most crucial factor to get right in our lifetimes or forever hold...
